Work History

(Psst, if you like blog posts, I wrote one about the first 10 years of my career: 10 Years as a Software Developer)

Side Projects

2014 – now

noeldemartin.com/projects

I'm always exploring new technologies and learning with side projects. You can learn more about them in my website, but here's some highlights:

- Working on an AI harness called Ànima.
- Creating a JavaScript framework to make interoperable local-first applications.
- Designed and implemented multiple open-source apps; See Umai, Media Kraken, and Focus.
- Talked about my work at various conferences, see my talk recordings and slides.
- Worked on the complete lifecycle of products, from inception to release. Such as a service to send printed postcards from an app, or various mobile games.
- Completed freelance work for multiple clients over the years. I've built corporate websites, mobile apps, backend services, internal tools, etc.

Technologies: VueJS, Laravel, MySQL, MongoDB, Ionic Framework (Android & iOS), Cordova, Android, Tailwind CSS, Docker, Solid Protocol, RDF, Vercel's AI SDK.

Fullstack Developer

5 months (December 2025 – April 2026)

Remote

Altworth

- Worked on a fullstack Solana application.
- Introducing best practices (testing, SOLID, ...) and modernizing codebase.

Technologies: React, Next.js, Node.js backend, Solana.

Fullstack Developer & Architect

7 months (May 2025 – December 2025)

Mataró, Barcelona (Spain)

Accountali

- Creating an accounting SaaS for e-commerce businesses in Spain.
- Introducing best practices (testing, SOLID, ...) and modernizing codebase.
- Implemented Browser Extension to process invoices in Amazon Seller Central.

Technologies: NestJS, MongoDB, VueJS, TailwindCSS, WXT.

Fullstack Developer
Moodle

4 years, 9 months (November 2019 – July 2024)

Remote & Barcelona (Spain)

- Worked on the Moodle App, an Open Source mobile app with millions of daily active users.
- Worked on accessibility to achieve various WCAG 2.1AA accreditations.
- Lead the development of the Apps Portal, a billing platform to manage premium app features.
- Improved testing strategy and code quality, see this presentation for details: Moodle App Testing: Then and Now.

Technologies: Laravel, MySQL, React Native (Android & iOS), VueJS, Amazon Web Services.

Fullstack Developer
MusicList

1 year, 6 months (June 2018 – November 2019)

Barcelona (Spain)

- Maintained and improved website with more than 200.000 unique monthly visitors.
- Managed integrations with various 3rd party APIs (Spotify, Apple Music, etc.)
- Implemented cross-platform mobile application with React Native.
- Developed and prototyped ideas for new value propositions.
- Coordinated UI/UX and development teams.

Technologies: Ionic Framework, Angular, PHP, Moodle, Chargebee

Co-founder
Geemba

1 year, 9 months (April 2016 – January 2018)

Mataró, Barcelona (Spain)

- Co-founded a startup focused on improving the fitness industry.
- Created an innovative billing system for gyms: “pay per minute”.
- Created SaaS platform to improve communication between gyms and customers.
- Created a microservices architecture with APIs, web apps, and mobile apps.
- Lead software architecture and coordinated the product team (designers and developers).
- Participated in university programs to share industry knowledge with students.

Technologies: Laravel, MySQL, MongoDB, Ionic Framework, Vue, Angular, Stripe, Azure.

Technical Lead
Beast Masters

1 year, 7 months (September 2014 – March 2016)

Remote (Spain)

- Worked with illustrators, designers, and sound artists to create a cross-platform mobile multiplayer game.
- Created a protocol for real-time communication between mobile devices.
- Created an asset management system to synchronize game assets over the air.
- Used agile methodologies to coordinate a remote team.

Technologies: Laravel, NodeJS, MySQL, LibGDX, Android, jQuery, Digital Ocean.

Software Developer
Toro Intl

2 years (August 2012 – August 2014)
Taiwan & Spain

- Relocated 5 months to Taiwan for training.
- Implemented UI toolkit from scratch using drawing primitives in J2ME.
- Tutored final degree project in university about True Type Font rendering.
- Defined Android architecture to manage NFC payment widgets using web technologies.
- Debugged and improved proprietary assembly code and virtual machine for J2ME.

Technologies: J2ME, Android, Akami ASM (Proprietary language).

Web Developer
Veziko

1 year (July 2011 – July 2012)
Mataró, Barcelona (Spain)

- Implemented SaaS platform for restaurants.
- Worked on backend & frontend architecture.
- Participated in entrepreneurship formation programs.

Technologies: CodeIgniter (PHP), MySQL, Amazon Web Services, jQuery.

Education

Bachelor's Degree in Software Engineering
Universitat Autònoma de Barcelona

3 years (2008 – 2011)
Sabadell, Barcelona (Spain)

- Completed education on software engineering.
- Took complimentary courses in MOOC platforms such as Coursera, Udacity, etc.
- Collaborated in improving a tuning tool for C++ applications running in parallel as part of final degree project.
- Started a masters degree in Artificial Intelligence and Computer Vision, but didn't finish due to a work opportunity requiring relocation.
