

Media Kraken

@ Solid World

Hello, my name is Noel

- Developer & Entrepreneur
- 4-day workweek @ Moodle
- Working on Solid on the side

noeldemartin.com

noeldemartin.social

[@NoelDeMartin](https://twitter.com/NoelDeMartin)

What is Media Kraken?

- ✓ A Solid App
- ✓ Open Source (GPL-3.0)
- ✓ A Media Tracker

 Demo

🌟 Feature Highlights

Feature Highlights

Progressive adoption

Start using browser storage (IndexedDB),
upgrade to Solid when you're ready

Feature Highlights

Data import

If yours is missing, let me know [on github](#)!

Feature Highlights

Movies search

Powered by

THE MOVIE DB

Feature Highlights

Mobile friendly

PWA

Progressive Web App

Install it in your phone and use it like a native app!

Feature Highlights

Privacy friendly

Zero trackers

Media Kraken only talks with:

- [The Movie DB](#) (search, metadata & images)
- [Github Pages](#) (hosting)
- [Sentry](#) (error reporting, disabled by default)
- Your Solid POD!

“Roadmap”

Some things I’d like to work on in the future

- Better search, filters & stats.
- Create lists – and [share them](#).
- Track other types of media like TV Shows.
- Etc.

What Media Kraken doesn't do

and probably never will

~~Recommendations~~
~~Social interactions~~

But that doesn't mean you can't do it!

Solid is all about interoperability, you can use other apps
to enrich your experience.

Technical details

The Stack

[VueJS](#)

[TailwindCSS](#)

[SoukaiJS](#)

What is SoukaiJS?

soukai.js.org

- I made it!
- ActiveRecord javascript library.
- Use “engines” to store data in different places.

One API, multiple stores

soukai.js.org

Browser Storage

IndexedDBEngine
built-in

Solid POD

SolidEngine
soukai-solid

Media Kraken Models

schema.org

Using the Models

```
// Create movies

const container = await MediaContainer.find('https://my-pod.com/movies/');

const movie = new Movie({
  title: 'Pirates of the Caribbean',
  releaseDate: new Date('June 28, 2003'),
});

await container.relatedMovies.save(movie);
```

Using the Models

```
// Get movies

const movies = await Movie.from('https://my-pod.com/movies/').all();
```

```
// Use movies

if (confirm(`Do you want to mark ${movie.title} as watched?`)) {
    await movie.watch();
}
```

Thank you!
